

Juan Antonio González Torres

Principal Software Engineer · Platform & AI Systems

León, Guanajuato, MX | agonzalez.nrn02@gmail.com | +52 477-744-24-27 | github.com/agonzalez1704 | linkedin.com/in/juan-antonio-gonzalez-torres

PROFESSIONAL SUMMARY

Principal-level engineer with 12+ years delivering high-scale SaaS platforms, AI/LLM-integrated systems, and real-time data pipelines. Track record of owning architectural decisions end-to-end — from distributed backend design to micro-frontend strategy — while driving 50–70% efficiency gains across teams. Built and shipped multiple production AI SaaS products (LLM pipelines, MCP servers, multi-agent orchestration) and led engineering teams across US and MX. Experienced technical leader who mentors engineers, authors cross-team RFCs, and aligns engineering roadmaps with product strategy.

CORE TECHNICAL SKILLS

Frontend	React 17+, Next.js 14+, TypeScript, Micro-frontends (Module Federation), Radix UI, Tailwind CSS, WebSockets
Backend	Node.js, NestJS, PostgreSQL, Prisma ORM, Supabase, REST/GraphQL APIs, BullMQ, Event-driven architecture
AI & Automation	LLM integration (OpenAI, Anthropic, Google Gemini), MCP Servers, n8n, Trigger.dev, Prompt engineering, Multi-agent orchestration, AI SDK
Cloud & DevOps	AWS (S3, Secrets Manager), Docker, GitHub Actions CI/CD, Vercel, Sentry, Stripe integration
Auth & Data	Clerk, NextAuth, JWT, Okta, MongoDB, Prisma Accelerate, Mapbox
Leadership	Technical mentorship, RFC authoring, architectural review, cross-functional collaboration, standards definition

PROFESSIONAL EXPERIENCE

Principal Engineer Bluumly — Remote 2024 – 2026

- Led full-stack architecture of a social media SaaS platform: Next.js 14 frontend, NestJS backend engine with BullMQ job queues, AWS S3 storage, WebSockets, JWT auth, and Swagger-documented APIs.
- Rebuilt entire platform from scratch in 30 days; designed system from ground up including real-time APIs, role-based access control, and event-driven background processing.
- Built LLM content pipeline converting raw web data into structured AI context for social automation, eliminating ~80% of manual editorial effort.
- Designed and shipped 3 MCP servers: a Prisma-backed data access layer, an Ayrshare social media integration, and a core business logic server — enabling reliable AI agent tool-use across multi-agent LLM workflows.
- Built advanced n8n automation pipelines orchestrating cross-platform workflows — webhooks, scheduled jobs, socket triggers, and conditional branching — reducing operational load by 60%.
- Designed and implemented analytics time-series engine for social media performance metrics: aggregated engagement data, computed rolling averages, trend detection, and percentile-based benchmarking across multi-channel datasets.

Senior Software Engineer Signal Labs — Austin, TX (Remote) 2021 – 2024

- Owned architecture and reliability of Signal Enterprise, a real-time media intelligence platform processing millions of social signals per day (React + Redux + Ant Design + D3).
- Led backend ownership of Node.js "Bacon" service layer — implemented security hardening, rate-limiting, and optimizations that reduced P99 latency by ~35%.
- Architected and shipped "Detect" — a global real-time social post geo-mapping feature using Mapbox — from RFC through production, coordinating across 3 engineering teams.
- Built micro-frontend "DetectUI" module (Radix UI, Tailwind, TanStack Query) as part of org-wide shift to Module Federation architecture.
- Mentored 3 junior/mid engineers; established code review standards and drove TypeScript migration plan adopted org-wide.

Senior Software Engineer Svitla Systems — Remote (MX) 2019 – 2021

- Built end-to-end automation suite for internal hiring and onboarding workflows, eliminating 70% of manual process time across HR and engineering teams.
- Refactored duplicated feature modules into shared component libraries, improving build performance and accelerating delivery across 4 product teams.
- Rated top 5% of employees across multiple consecutive review cycles; recognized for delivery quality, cross-team collaboration, and technical leadership.

Lead Software Engineer Brain Display — Austin, TX 2015 – 2019

- Led a 5-engineer team to design and ship a ticket e-commerce platform using micro-frontend architecture — one of the early production deployments of this pattern at scale.
- Reduced average feature turnaround by 20% through CI/CD pipeline improvements and internal developer tooling.
- Resolved 10+ critical production incidents within 24 hours; authored incident runbooks that reduced recurring issues by 40%.

Junior Software Engineer Grupo Camrey — León, MX 2013 – 2015

- Built fullstack features across multiple web platforms; developed foundational expertise in JavaScript, server-side development, and relational databases.

SELECTED PERSONAL PROJECTS

Auto-Toon	Next.js, Google Gemini, OpenAI, Stripe, Clerk, Prisma	AI SaaS that converts images/video into toon/cartoon style using multi-model LLM pipeline. Stripe-monetized with Clerk auth.
Images AI SaaS	Next.js, Cloudinary, MongoDB, Stripe, Clerk	AI-powered image manipulation SaaS — transformations, generative fill, background removal. Full payment integration.
Shopify MCP Server	Python, Modal, MCP SDK	MCP server exposing Shopify APIs to AI agents; deployed on Modal serverless infrastructure.

CRM POS	Next.js, Prisma, NextAuth, bcrypt	Point-of-sale CRM system with auth, role management, and transaction tracking.
Komanda	React Native (Expo), expo-router, TanStack Query, Insforge (Postgres)	Native mobile app for restaurant order management — waiters take and track orders in real time; offline-capable with async storage persistence.

EDUCATION

B.S. in Software Engineering Universidad de La Salle Bajío — León, Guanajuato, MX 2009 – 2013

NOTABLE ACHIEVEMENTS

- Top 5% employee performance rating at Svitla Systems — multiple consecutive review cycles.
- Delivered full SaaS platform rebuild in 30 days (Bluumly) — sole architect and engineer, concept to production.
- Shipped 3 independent production MCP servers enabling multi-agent LLM workflows with domain-specific tool use.
- Architected and launched 2 monetized AI SaaS products (Auto-Toon, Images AI SaaS) with Stripe payment integration.
- Drove org-wide TypeScript adoption at Zignal Labs through RFC process, code standards, and direct team mentorship.
